## Tools That Create Powerful Websites

### Driving Productivity, Connectivity, and Innovation

---

#### Powerful Adaptability

At SchoolWorld, we understand that not all learning environments are exactly the same. Each district and school has specific needs, objectives, and goals. To meet these diverse requirements, we have created several robust WebModules.

Our WebModules are easy to use and enable districts and schools using our SchoolSites™ product to become more organized, improve communications, streamline processes, and track common happenings throughout their learning environments. SchoolWorld WebModules are developed based on input from those in education—in functional areas such as IT, administration, teaching, and community outreach.

#### Information to Remember

- All WebModules seamlessly integrate with our SchoolSites product.
- WebModules are conveniently accessible through our website administrative area.
- If you already have a school website tool in place, you can use any of SchoolWorld's WebModules as stand-alone components.

"I really love the webpage you and Mrs. Pick have put on the BHCS website! The book suggestions are great along with the links to education websites. I also like to know I can go there for an update on what's coming this week."
